delete.data.table 1

Index 2

delete.data.table	<i>This function allows deleting a data.table by removing all references to it in a given environment. In memory-strapped environments, we’d like to help the garbage collector reclaim memory that’s not logically referenced anymore. Note that any errors will be logged without a traceback for uninterrupted execution. TODO: Note that this function is NOT thread-safe.</i>
-------------------	--

Description

This function allows deleting a data.table by removing all references to it in a given environment. In memory-strapped environments, we’d like to help the garbage collector reclaim memory that’s not logically referenced anymore. Note that any errors will be logged without a traceback for uninterrupted execution. TODO: Note that this function is NOT thread-safe.

Usage

```
delete.data.table(target, environ_objs, environ = .GlobalEnv)
```

Arguments

target	data.table object to be deleted
environ	environment to search for this object (default: .GlobalEnv)
environObjs	list of R objects in the given environment (see: ls())

Index
